

How to help ensure you don't lose crypto to another fraud or hack again

Last Modified on 05/10/2025 3:07 am EDT

So you lost some crypto in a fraud or hack of some type. Regardless of whether you lost a lot, or a little, and regardless of how you lost it (e.g. pig butchering, phishing, investment scam, account takeover, seed compromise etc..) it is critically important to take steps to prevent any additional losses and to avoid falling victim again.

The best way of doing this is by educating yourself about the various types of scams and frauds out there, and how they work, and then taking corrective measures and improving your security & OPSEC procedures so you don't fall victim again. This should be considered a top priority

Unfortunately, some victim's believe that after losing a large amount of funds to a fraud, they "won't make that mistake again" but don't invest time and resources into their own education. For some, the primary focus is trying to find any way possible to recover their loss yet they do little to nothing with respect to their education to prevent additional losses. In many cases we encounter, this results in fraud victim's falling victim to another scam again, sometimes losing hundreds of thousands of dollars more than what they already lost.
